

APRIL 2026

## I Promised You...

I promised you a BIG reveal in last months newsletter, and like all our promises we make at Sheldon Precision; I'm not going to let you down!

Below you will see our latest addition to our growing fleet of high precision, highly efficient, production machines. This machine will increase capacity and reduce cycle times, which benefits our customers with shorter lead times and cheaper prices!

April has been a great month for various reasons; on a personal level I took 2 weeks holiday and the team absolutely crushed it while I was away, it was a real moment of pleasure knowing what I had built was starting to run without my 100% input. This enables me to work on the big picture stuff and really move the business forward!

April was also the month that the Birmingham NEC hosted the 2026 MACH exhibition. This is the largest biennial manufacturing event of the Calander. Engineers from all over the UK go to drool over the latest technologies on display, it really is for me an unmissable event and this year did not disappoint!

Well done to all the exhibitors!

### P.S.

One of my employees asked for a pay rise this week, he said 3 companies were after him...

Turns out they were electric, gas and water

*Howard Sheldon*

APRIL 2026

## Happy Birthday

We always like to get the whole team together to mark a birthday the right way; chocolate cake and Victoria sponge!

Happy Birthday to Connor, you rock!

## New Machine Day!

We welcomed the arrival of our latest addition to the team.

This model is the L12 from the Citizen range, designed for high precision production, the machine is fully equipped with swarf conveyor, high pressure coolant and LFV chip breaking software, to cap it off we have 15,000 rpm spindles!

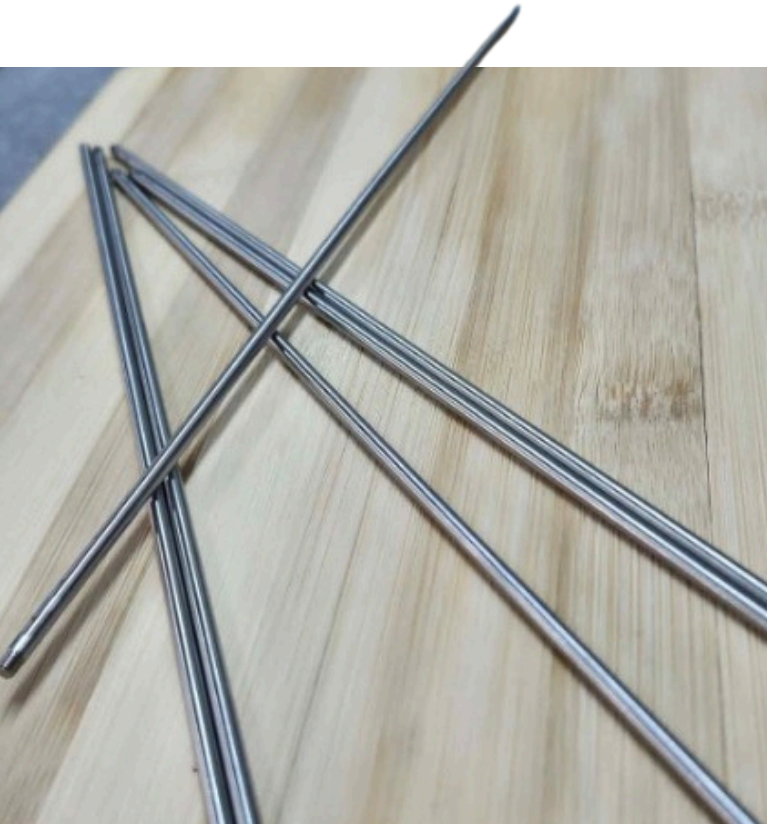

Yes you read that right!

## We are Not Stopping at the L12...

Another Big unveiling is planned for next month, make sure you open up the newsletter next month to see what it is!

## A Look at This Month's Work

We've had a strong mix of components through the shop this month, with a particular focus on stainless steel machining.

It's a material we work with regularly, and it shows in the finish and consistency we achieve.

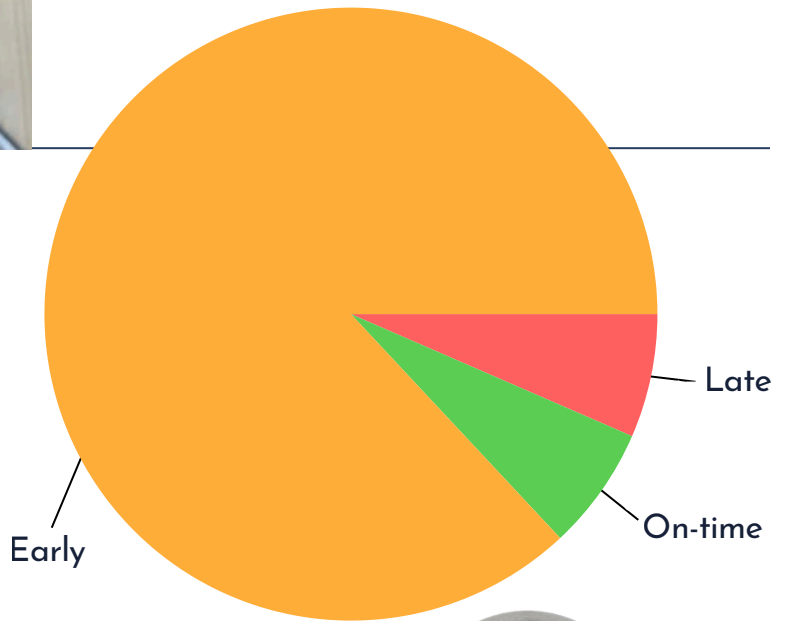

This part is a good example of that. Clean, meticulous, and exactly what the customer needed.

Credit to the team for maintaining that level of quality!

## April's O.T.D. is Looking Strong!

Just look at all those early deliveries!! Man, there are some pleasantly surprised customer's out there. 😊

<span style="color: orange;">■</span> Early	<b>86.96%</b>
<span style="color: green;">■</span> On-time	<b>6.52%</b>
<span style="color: red;">■</span> Late	<b>6.52%</b>
